A Message from Peter R. Pi, Sr.
President & CEO

To our valued Customers:
The Team at Dakota Ammo Inc. takes great pride in developing premium, high performance ammunition. We use only the highest quality components and put our products through rigorous daily testing to insure that we bring you the safest products available. In March of 2004 we became a member of SAAMI. We have the most modern pressure testing equipment in the industry. We are an American Family owned corporation and behind our products is over 20 years of reliability and innovation.

Our research and development team has been busy developing new and exciting products. We are once again proud to work with Smith & Wesson this year to develop ammunition for their XVR (Extreme Velocity Revolver) Revolver. The 460 S&W Magnum 200gr Barnes XPB, will be known as the highest velocity center fire revolver ammunition in the industry. Be sure to check out the latest additions to our 500 S&W Magnum ammunition and also our New Expanding line of DPX ammunition.

COR®BON products are changing their packaging. Same great ammo, but with an updated look. We have started with our HUNTER ammo and will expand it to include the entire product line. We think you will love it.

I am honored to announce that I have been awarded a US Patent for my design of the Pow'RBall Bullet. If you haven't become familiar with it, you may be excited to discover its unique features.

Thank you very much for your continued business and support. 2005 promises to be another exciting year for the COR®BON/Glaser family of products.

Good shooting,

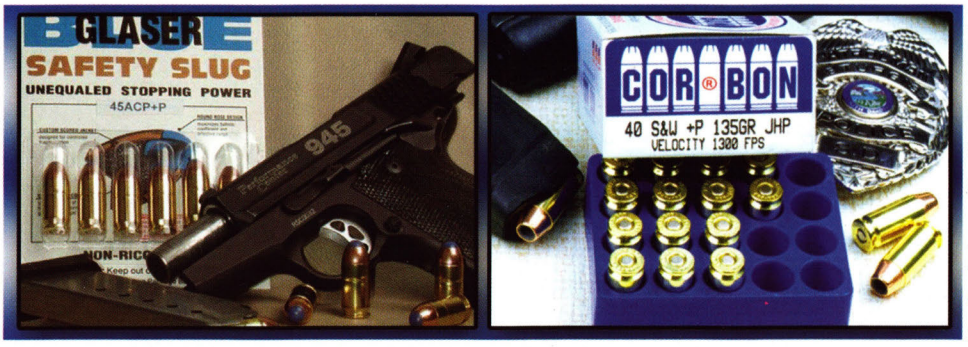
SELF DEFENSE and LAW ENFORCEMENT

For over 20 years the COR®BON jacketed hollow point bullets in all calibers, and nearly all bullet weights, have given an average of ten to twelve inches of penetration. For those who believe eight to ten inches of penetration is plenty, we at COR®BON/Glaser will never argue against this viewpoint, but with very slight changes in bullet design, i.e.: jacket thickness and core density, we can now achieve deeper penetration (12" to 14").

"There is no substitute for velocity."
~ Peter R. Pi, Sr.

There is no substitute for velocity. Do not be mislead by those claiming magical properties for their bullets or claim their reduced velocity, lower recoil has increased performance. Until the laws of physics are negated, those claims for performance equal to COR®BON and Glaser Safety Slug® are figments of an ad writers imagination.

The energy is what allows a correctly designed bullet to do its business, quickly and violently inside a target. The higher the velocity, the more rapid the expansion, the more effectively energy is expanded inside the target. This explosive expansion transfers energy into a target, where it really counts.



The testing of COR®BON ammunition is a continual and on going process. We shoot through windshield glass and car doors into gelatin covered with four layers of fresh, new denim and leather. By comparing our product shot in ordinance ballistic gelatin to actual autopsy results we have discovered what works.

The acquisition of the long established Glaser Safety Slug® Company means we can now offer our customers a line of pre-fragmented ammunition. The Glaser Safety Slug® has been depended upon by law enforcement and civilians for over 30 years.

The COR®BON research and development team took on the task of fine tuning the original line of pre-fragmented ammunition. The velocity and energy levels remain the same but now the energy delivered inside the target has had some changes. It is important to remember that the energy developed by a bullets velocity is just a number. The importance is how the bullet utilizes the energy inside the target.

You might pay a little more for Glaser Safety Slug®, but in this case you get what you pay for. Inexpensive reproductions just cannot compare to the original, time proven Glaser Safety Slug®. You need to ask yourself, "How much is your life worth?"

New to our self-defense and law enforcement line, last year, is the Pow'RBall™. It has become the new choice of many law enforcement agencies.

Please refer to the Pow'RBall™ section of this catalog for more detailed information. See what makes Pow'RBall so special that renowned bullet designer Peter R. Pi, Sr. was awarded a U.S. Patent.

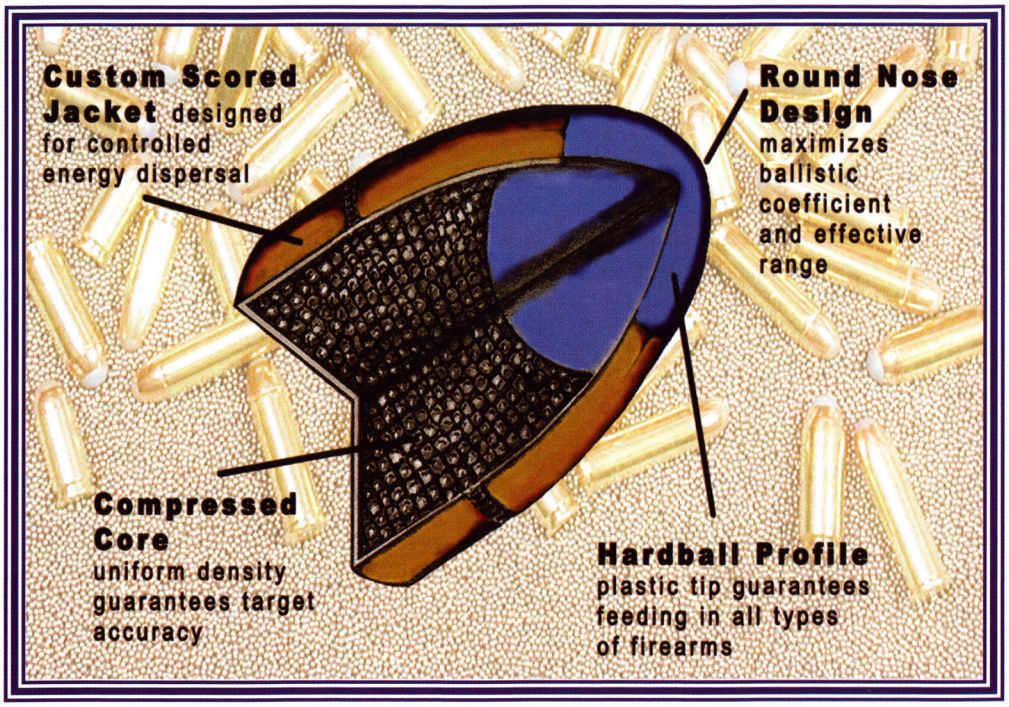
Home Defense Glaser Safety Slug Self-Defense



Custom Scored Jacket designed for controlled energy dispersal
Round Nose Design maximizes ballistic coefficient and effective range
Compressed Core uniform density guarantees target accuracy
Hardball Profile plastic tip guarantees feeding in all types of firearms

Features
•Exceptional Accuracy
•High Energy
•Increased Stopping Power
•Reduced Recoil
•Safe to use in any appropriately chambered firearm
•Ricochet minimized
•Over penetration minimized
•Compressed core
•Maximum Fragmentation

Glaser Safety Slug® is the perfect choice for home and self defense. It offers reduced penetration in solid (inanimate) objects while delivering maximum stopping power with minimum danger of ricochet or over penetration.

In a straight shot at unsupported sheetrock, any projectile will penetrate. Sheetrock is not much of a barrier. However in the majority of home defense situations, the bullet strikes the wall at an angle, hitting a stud or door jam. Typically the Glaser Safety Slug® will start to fragment as it enters the opposite room in fewer lethal pieces. This is why the Glaser Safety Slug® is so highly thought of for self defense in apartment complexes, mobile homes and residential areas.

The Glaser's composite design uses a special thin-wall jacket and precision compressed lead shot core with a soft Polymer tip. This construction provides an optimum balance between penetration and expansion, resulting in controlled disintegration. The round-nose ballistic design of the bullet profile guarantees feeding reliability and maximizes effective range with target grade accuracy.

Glaser has over 30 years of acceptance in the professional and private community.

Stopping power is maximized by the complete dispersal of the bullet energy into the intended target with immediate shock and trauma. This rapid fragmentation delivers the available energy over a large area. Stopping power is maximized with the optimum balance of bullet weight and velocity. The complete dispersal of the bullet energy in the intended target creates immediate shock and trauma. Glaser Safety Slug® has unequaled muzzle energy with the best balance of penetration available. This combination reduces the felt recoil and allows a fast recovery for follow up shots if necessary.

Glaser Safety Slug® is available in two types. Blue uses #12 shot that creates immediate energy dispersal into the target. Silver is made up of #6 shot that will give you much larger segments, deeper penetration and controlled energy release.

Glaser Safety Slug® has been used by Sky Marshal's, Prison Guards, Law Enforcement Agencies and other professional bureaus. The Glaser Safety Slug® has an exceptional reliable reputation for over 30 years.

*****Glaser Silver is not available in all calibers.**

*Not loaded to SAAMI specifications

Glaser BLUE: uses #12 shot compressed into a nearly solid form.

The Glaser BLUE produces immediate energy dispersal into the target, reducing the possibility of over penetration and creating abrupt stopping power. The numerous projectiles expand outward generating an effective wound cavity and a secondary stretch cavity.

Glaser SILVER: is made up of #6 shot. With the SILVER load, you get much larger segments; deeper penetration and controlled energy release.

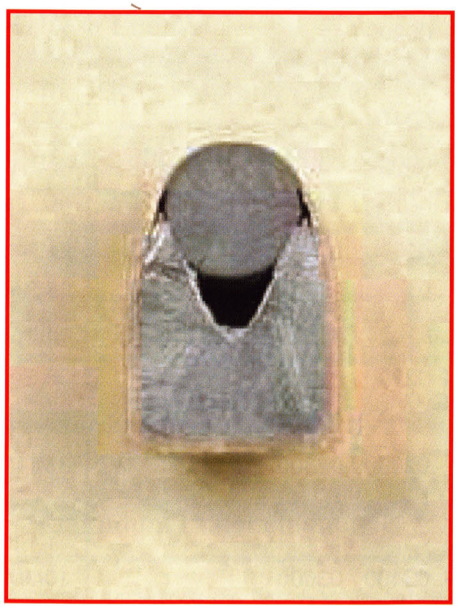
POW'R BALL POW'R BALL POW'R BALL

GLASER SAFETY SLUG

POW'R BALL™ THE FUTURE NOW

Peter R. Pi, Sr. has proudly been awarded US Patent No. 6,792,869, for his unique Pow'RBall™ bullet design.



Glaser has expanded their line of premium high velocity ammunition to include the Pow'RBall™ bullet design. Pow'RBall™ is a breakthrough concept designed and developed by renowned bullet maker Peter R. Pi, Sr. This bullet design is so unique it now carries a U.S. Patent. The Pow'RBall™ is a controlled expansion bullet capped with a polymer ball giving it a "full metal jacket" or rounded "ball" profile. The polymer ball is smooth and slick. It will not hang up or snag as it guides the cartridge effortlessly into the chamber. The jacketed bullet's lead core is shaped into a specially designed cavity that promotes deep penetration and high weight retention. All of this aids in energy transfer that produces superior stopping power. Pow'RBall™ will not get plugged by heavy clothing and easily penetrates windshield glass or light sheet metal. This ammunition will give you confidence and peace of mind knowing you can count on it in a critical situation.

Recovered bullets from test medium have outstanding (80% or better) weight retention and excellent levels of penetration.

COR®BON'S research & development team proudly offers an environmentally friendly line of ammunition, featuring a solid copper projectile...

DPX

Deep Penetrating X Bullet

COR®BON products have earned a distinctive reputation in the industry with our high energy JHP ammunition. Being consistent with this standing, we have combined the higher energy in our new DPX line along with its deeper penetration to make this the optimum load for Law Enforcement, as well as Civilian use.

DPX offers impressive expansion and deeper penetration from the solid copper Barnes X Bullet and retains 100% of its weight even when shot through barriers such as clothing and steel. The permanent crush cavity is considerably larger than a typical JHP due to deeper penetration.

Deep Penetrating X Bullet

Hunting Ammunition

COR®BON's Bonded-Core style bullets are not just another pretty face. These are true heavy-duty hunting bullets of the highest quality. Each bullet is carefully weighed, swaged and inspected by hand to ensure that you have the strongest bonded bullet available. The soft lead core is bonded to the outer jacket to make a bullet that will not break apart. These bullets stay together when pushed to very high velocities - they expand producing excellent knockdown power and stay in one mass to provide deep controlled penetration. This is the bullet you need for deer, bear, elk, moose and other trophy game animals.

Each bullet is carefully weighed, swaged and inspected by hand to ensure that you have the strongest bonded bullet available.

Clint
Sioux Falls, South Dakota
45/70Govt.

David Bauer
Baxter, Minnesota
45/70 Govt.

The Penetrator style bullet was designed specifically for tough skinned, heavy muscled game. It carries a heavy full copper jacket over a linotype hard lead core. It crashes through thick hide and shatters the greatest bone mass.
A through-and-through hole is often the result - this bullet never fails, even if pushed to the highest velocities.
The Penetrator carries bone-breaking power and has taken everything the African continent has to offer-even Rhino and Cape Buffalo.
It is also the preferred load for other tough critters such as the large hogs and is an excellent choice for your sidearm in bear country.
COR®BON's Hard-Cast hunting bullets are made with premium linotype hard lead using the proven LBT flat nose design.
They fly straight, provide excellent shocking power and deep penetration - with no expansion. A good traditional choice for bringing down game. To complete the lineup, COR®BON also gives you the choice of Jacketed Hollow Point and Jacketed Soft Point bullets. The hollow point design offers rapid expansion and extreme mushrooming. Used by many hunters on Whitetails and Antelope with good success.
This accelerated expansion insures that the energy is dumped into the target. The next step up in the line is the jacketed soft point. Expansion is very reliable on all kinds of game and the extra weight offers more knockdown at close range on medium skinned game. A very economical selection for many hunting adventures.

COR-BON AMMUNITION
DPX
DEEP PENETRATING X BULLET

Hunter

DPX is our Deep Penetrating X line of ammunition utilizing a proprietary solid copper X bullet from Barnes Bullet Co.

The manufacturers of Cor®Bon are never ones to rest on our laurels, always working towards new and improved product lines. Get the lead out is a favorite saying around here!

We have designed a line of environmentally friendly ammunition for hunting, utilizing the Barnes Solid Copper X line & Triple Shock bullets. These bullets give deep penetration along with very reliable & consistent expansion. Weight retention is 100% with this exceptional monolithic bullet.

COR®BON US Cavalary - Cowboy Action

THE LOADS THAT WON THE WEST

US Cavalry reproduction ammunition is loaded with modern black powder to give the realistic smoke and kaboom of the Old West. Modern black powder reduces fouling and the corrosive effects of sulfur based charcoal powders.

For those of you born 100 years too late, COR®BON offers a bit of nostalgia. The US Cavalry Black Powder Ammunition was developed with the traditions of the Old West in mind. Available in 45 Colt, 38 Special, 45 Schofield, and 44WCF (44-40), 45-70, and 12 Guage. They are packaged in 96 round bulk carton reminiscent of days gone by.

Traditional paper hulls are loaded with lead shot and pushed with a modern black powder.

Ten rounds of 12 guage come in a traditional cardboard box.

While the pistol and lever gun were popular defensive weapons, the Scattergun was a true intimidator. Stagecoach guards and lawmen were often seen packing their trusty Scattergun for those unfortunate times when things got out of hand.
